

START HERE

Is your technology working for your business — or is your business working around your technology?

Most of the organizations we work with recognize themselves in at least three of these.

- Your people spend hours a week on repetitive administrative work.
- Information is copied by hand between systems that do not talk.
- Employees are already using ChatGPT, Copilot, Claude, or Gemini.
- You want AI capability but not at the cost of exposing sensitive data.
- A customer is asking for your SOC 2 report.
- Security questionnaires are getting harder to answer honestly.
- You have security policies but could not prove the controls operate.
- Growth is outpacing your security and technology governance.
- You are moving toward larger customers or government work.

Recognize three or more? That is a conversation worth having.

BSTS OPERATES WHERE

AI + automation + security + compliance come together.

NEXT STEP

What problem should we solve first?

BSTS begins with discovery, not a predetermined technology.

- If AI does not solve the problem, we say so plainly.
- If automation creates value, we implement it securely.
- If control gaps exist, we build a practical path to closing them.

BEYOND CHECK-THE-BOX COMPLIANCE

Continuous assurance

From documenting that controls exist to demonstrating they work.

System evidence → control validation → framework mapping
→ drift detection → remediation → audit-ready evidence

A direction BSTS is building toward, not a product available today.

Start with a discovery conversation.

Capabilities, engagement detail, and contact.

BEVIER STRATEGIC TECHNOLOGY SOLUTIONS

SERVICE-DISABLED VETERAN-OWNED & OPERATED

SBA VetCert application planned; BSTS is not currently an SBA-certified SDVOSB. Nothing here implies endorsement by the SBA, the U.S. Army, the Department of Defense, or any government agency.

BSTS

BEVIER STRATEGIC TECHNOLOGY SOLUTIONS

Secure the data. Enable the AI. Prove the controls.

Secure AI • Intelligent Automation
Cybersecurity • Compliance Readiness

WHAT WE DO

- Secure AI & Automation
- AI Security & Governance
- SOC 2 & Compliance Readiness

Build smarter. Operate securely.

VETERAN-OWNED & OPERATED

bsts.pages.dev

SECURE AI & AUTOMATION

Automate the work. Not the risk.

We find the workflows costing the most hours for the least judgment and automate them. Where a model genuinely improves the outcome we use one; where a deterministic script is better, we build that instead.

TYPICAL WORK

- Document and form processing
- Email and inbox workflows
- CRM and record synchronization
- Reporting and reconciliation
- Knowledge retrieval and secure RAG
- AI-assisted research and drafting
- Workflow orchestration and integrations
- AI agents, where the guardrails justify one

ANSWERED BEFORE WE BUILD

- What data is involved?
- Where does it travel?
- Who can access it?
- Which model or provider processes it?
- What is retained? Can it be used for training?
- What is logged?
- What requires human approval?
- What regulatory or contractual rules apply?
- What happens if the AI is wrong?

Secure AI by design.

Security is not a phase at the end of an AI project. Data boundaries, access, oversight and evidence are decided first.

AI SECURITY & GOVERNANCE

Use AI with control.

Generative AI arrived in most organizations through individual employees, not procurement. The exposure is real but undocumented. We find out what is actually in use, then build the smallest set of controls that lets useful work continue safely.

THE QUESTIONS LEADERSHIP CANNOT ANSWER TODAY

- What AI is being used, and by whom?
- What data is going into it?
- Which tools and models are approved?
- Which use cases carry real risk?
- What requires human oversight?
- What happens when a system behaves unexpectedly?

TYPICAL WORK

- AI use-case inventory and risk assessment
- Approved-use and acceptable-use policy
- Vendor and model risk review
- Data-flow review and data classification
- Access-control and DLP recommendations
- Human-in-the-loop design
- AI risk register and governance roadmap
- NIST AI RMF alignment where useful

Enable AI safely.

Alignment to a framework describes methodology. It is not certification — NIST does not certify consultancies or the organizations they advise.

THREE PROBLEMS · ONE LIFECYCLE

Retrofitting them afterward costs more and proves less.

SOC 2 & COMPLIANCE READINESS

When your customer asks: “Can you prove it?”

Growing organizations reach a point where larger customers start requesting SOC 2 reports, security questionnaires, control evidence, and vendor security documentation. The work that follows is unglamorous — and entirely doable with a plan.

TYPICAL WORK

- Readiness assessment and scoping support
- Control inventory and control mapping
- Gap analysis and remediation tracking
- Evidence requirements and PBC preparation
- Policy and procedure alignment
- Control-owner coordination
- Evidence organization and audit preparation
- Evidence automation opportunities
- Security questionnaire response support
- Auditor coordination during fieldwork

MAPPING & READINESS SUPPORT

SOC 2 · NIST CSF 2.0 · NIST SP 800-53
NIST AI RMF · ISO/IEC 27001 · HIPAA
CJIS · NIST SP 800-171 · CMMC
FedRAMP-related environments

BSTS does not issue SOC 2 reports. SOC 2 examinations and attestation reports are performed by qualified independent CPA firms. BSTS prepares your organization for that examination.

THE 10-SECOND VERSION

When your client says...

"We're wasting too much time doing this manually."

"Everyone here is using AI and I don't know what they're putting into it."

"We want to use AI, but I'm worried about our data."

"Our software systems don't talk to each other."

"A customer just asked us for a SOC 2 report."

"These customer security questionnaires are getting ridiculous."

"We're trying to move into larger customers."

"We're trying to win government business."

"We don't have anyone internally who really owns AI governance."

"We have security policies, but I'm not sure we could prove the controls are working."

"We know this should be automated, but we don't know where to start."

That's a BSTS conversation.

BEFORE YOU INTRODUCE ANYONE

You identify the business problem. BSTS helps determine the technology path.

WHAT HAPPENS AFTER A REFERRAL

DISCOVER	Understand the business problem first.
ASSESS	Process, systems, data, risk, obligations.
RECOMMEND	In writing, with reasons.
IMPLEMENT	Only if it makes sense.

**No forced AI.
No solution looking for a problem.**

Have a client in mind?

Talk to us *before* you make the introduction. You are putting your own reputation behind it.

ADVISOR DISCOVERY CONVERSATION

SBA VetCert application planned; BSTS is not currently an SBA-certified SDVOSB. Nothing here implies endorsement by the SBA, the U.S. Army, the Department of Defense, or any government agency.

BSTS

BEVIER STRATEGIC TECHNOLOGY SOLUTIONS

**Secure the data.
Enable the AI.
Prove the controls.**

A field guide for business advisors

Recognizing when your client may need secure AI, automation, cybersecurity, or compliance support.

WHAT WE TAKE ON

- Secure AI & Automation
- AI Security & Governance
- SOC 2 & Compliance Readiness

Secure AI • Intelligent Automation • Cybersecurity • Compliance Readiness

VETERAN-OWNED & OPERATED

bsts.pages.dev

THE REFERRAL TRIGGER MAP

What you hear → where BSTS may help

"This process is incredibly manual."

→ **SECURE AI & AUTOMATION**

"Our employees are putting company information into AI."

→ **AI SECURITY & GOVERNANCE**

"We need SOC 2."

→ **SOC 2 READINESS**

"Our customer wants evidence of our cybersecurity controls."

→ **SECURITY & COMPLIANCE READINESS**

"Our systems don't communicate."

→ **WORKFLOW / SYSTEM INTEGRATION**

"We want AI, but our data can't be exposed."

→ **SECURE AI ARCHITECTURE**

"The security questionnaires are getting harder to answer honestly."

→ **SOC 2 READINESS**

"We're moving into regulated or government work."

→ **SECURITY / FRAMEWORK READINESS**

You do not need to diagnose the solution. Naming the symptom is enough — scoping is our job, and we do it before anyone is asked to buy anything.

FOR CONSULTANTS · FRACTIONAL EXECUTIVES

Good referrals don't need to know what technology they need.

THE PROFILE

Who should you introduce to BSTS?

A growing small-to-mid-sized organization, roughly **20–250 employees**, that handles customer, proprietary, or regulated information.

OFTEN MISSING INTERNALLY

- An AI team
- A cybersecurity team
- A compliance function

OFTEN PRESENT

- Repetitive administrative workflows
- Disconnected applications
- Employees experimenting with AI
- Rising customer security requirements
- Security questionnaires arriving
- SOC 2 pressure from a large customer
- Government contracting ambitions
- Real concern about AI adoption risk

COMMON SECTORS — NOT A LIMIT

B2B SaaS · professional services · government contractors · health technology · regulated technology · any organization holding sensitive customer information

CPAS · MSPS · ATTORNEYS · ADVISORS

They only need a business problem worth solving.

WHAT YOUR CLIENT GETS

What BSTS brings to the table

SECURE AI & AUTOMATION

Reduce repetitive work and connect business processes without giving up control of company data.

AI SECURITY & GOVERNANCE

Set responsible boundaries around AI, sensitive information, access, vendors, high-risk use cases, and human oversight.

SOC 2 & COMPLIANCE READINESS

Prepare controls, evidence, policies, and remediation for rising cybersecurity expectations from customers.

YOUR CLIENT RELATIONSHIP COMES FIRST

BSTS works alongside your client's existing IT team, MSP, cybersecurity provider, CPA, attorney, and consultants — complementing those relationships rather than replacing them.

THE ENGAGEMENT PATH

- 1 Discover** — understand the business first. Your client leaves with a prioritized roadmap either way.
- 2 Implement** — build one high-value thing and put it into production, tested before it touches live data.
- 3 Govern** — write down how it is supposed to work.
- 4 Assure** — prove it works, on an ongoing basis.

BSTS does not provide accounting, audit, legal, or tax services. BSTS does not issue SOC 2 reports. SOC 2 examinations and attestation reports are performed by qualified independent CPA firms. BSTS sells no licenses and takes no vendor commissions.
