

START HERE

Is your technology working for your business — or is your business working around your technology?

Most of the organizations we work with recognize themselves in at least three of these.

- Your people spend hours a week on repetitive administrative work.
- Information is copied by hand between systems that do not talk.
- Employees are already using ChatGPT, Copilot, Claude, or Gemini.
- You want AI capability but not at the cost of exposing sensitive data.
- A customer is asking for your SOC 2 report.
- Security questionnaires are getting harder to answer honestly.
- You have security policies but could not prove the controls operate.
- Growth is outpacing your security and technology governance.
- You are moving toward larger customers or government work.

Recognize three or more? That is a conversation worth having.

BSTS OPERATES WHERE

AI + automation + security + compliance
come together.

NEXT STEP

What problem should we solve first?

BSTS begins with discovery, not a predetermined technology.

- If AI does not solve the problem, we say so plainly.
- If automation creates value, we implement it securely.
- If control gaps exist, we build a practical path to closing them.

BEYOND CHECK-THE-BOX COMPLIANCE

Continuous assurance

From documenting that controls exist to demonstrating they work.

System evidence → control validation → framework mapping
→ drift detection → remediation → audit-ready evidence

A direction BSTS is building toward, not a product available today.

Start with a discovery conversation.

Capabilities, engagement detail, and contact.

BSTS

BEVIER STRATEGIC TECHNOLOGY SOLUTIONS

SERVICE-DISABLED VETERAN-OWNED & OPERATED

SBA VetCert application planned; BSTS is not currently an SBA-certified SDVOSB. Nothing here implies endorsement by the SBA, the U.S. Army, the Department of Defense, or any government agency.

BSTS

BEVIER STRATEGIC TECHNOLOGY SOLUTIONS

Secure the data. Enable the AI. Prove the controls.

Secure AI • Intelligent Automation
Cybersecurity • Compliance Readiness

WHAT WE DO

- Secure AI & Automation
- AI Security & Governance
- SOC 2 & Compliance Readiness

**Build smarter.
Operate securely.**

VETERAN-OWNED & OPERATED

bsts.pages.dev

Secure AI by design.

Security is not a phase at the end of an AI project.

SECURE AI & AUTOMATION

Automate the work. Not the risk.

We find the workflows costing the most hours for the least judgment and automate them. Where a model genuinely improves the outcome we use one; where a deterministic script is better, we build that instead.

TYPICAL WORK

- Document and form processing
- Email and inbox workflows
- CRM and record synchronization
- Reporting and reconciliation
- Knowledge retrieval and secure RAG
- AI-assisted research and drafting
- Workflow orchestration and integrations
- AI agents, where the guardrails justify one

ANSWERED BEFORE WE BUILD

- What data is involved?
- Where does it travel?
- Who can access it?
- Which model or provider processes it?
- What is retained? Can it be used for training?
- What is logged?
- What requires human approval?
- What regulatory or contractual rules apply?
- What happens if the AI is wrong?

Data boundaries, access, oversight and evidence are decided first.

AI SECURITY & GOVERNANCE

Use AI with control.

Generative AI arrived in most organizations through individual employees, not procurement. The exposure is real but undocumented. We find out what is actually in use, then build the smallest set of controls that lets useful work continue safely.

THE QUESTIONS LEADERSHIP CANNOT ANSWER TODAY

- What AI is being used, and by whom?
- What data is going into it?
- Which tools and models are approved?
- Which use cases carry real risk?
- What requires human oversight?
- What happens when a system behaves unexpectedly?

TYPICAL WORK

- AI use-case inventory and risk assessment
- Approved-use and acceptable-use policy
- Vendor and model risk review
- Data-flow review and data classification
- Access-control and DLP recommendations
- Human-in-the-loop design
- AI risk register and governance roadmap
- NIST AI RMF alignment where useful

Enable AI safely.

Alignment to a framework describes methodology. It is not certification — NIST does not certify consultancies or the organizations they advise.

THREE PROBLEMS · ONE LIFECYCLE

Retrofitting them afterward costs more and proves less.

SOC 2 & COMPLIANCE READINESS

When your customer asks: “Can you prove it?”

Growing organizations reach a point where larger customers start requesting SOC 2 reports, security questionnaires, control evidence, and vendor security documentation. The work that follows is unglamorous — and entirely doable with a plan.

TYPICAL WORK

- Readiness assessment and scoping support
- Control inventory and control mapping
- Gap analysis and remediation tracking
- Evidence requirements and PBC preparation
- Policy and procedure alignment
- Control-owner coordination
- Evidence organization and audit preparation
- Evidence automation opportunities
- Security questionnaire response support
- Auditor coordination during fieldwork

MAPPING & READINESS SUPPORT

SOC 2 · NIST CSF 2.0 · NIST SP 800-53
NIST AI RMF · ISO/IEC 27001 · HIPAA
CJIS · NIST SP 800-171 · CMMC
FedRAMP-related environments

BSTS does not issue SOC 2 reports. SOC 2 examinations and attestation reports are performed by qualified independent CPA firms. BSTS prepares your organization for that examination.
